

**RULE #1**

New GUARDIAN™ Breathers from Air Sentry® Check valve technology, first integrated into a breather by Air Sentry®, is taken to the next level, ensuring that adsorbent treats only the air drawn into your headspace, extending the life of the breather and greatly reducing replacement frequency.

**RULE #2**

GUARDIAN™ is the first breather ever constructed of Tritan™ (BPA free plastic) for the best combination of chemical, temperature and impact resistance on the market. Plus the metal reinforcement molded into the base cap protects against harsh vibration in the most demanding applications.

# To change the game, you gotta make new rules.

**RULE #3**

Air Sentry® was the first to offer replacement cartridges. Guardian's superior design takes it to the next level with the new Modular Stack Ring™ which allows more than one cartridge to be used in a single installation. Extends the service life of each breather to reduce cost and maintenance intervals.

**RULE #4**

GUARDIAN™ is the first to feature an integrated compound gauge. This provides an additional, accurate visual indicator of both intake and exhaust pressure conditions.

**RULE #5**

GUARDIAN™ is first again with an isolation check valve, which protects the adsorbent from exhaust air to lengthen service life of the desiccant while also protecting it from splashing fluids and harmful vapors.
